

## Data Projector Connection

### Connecting a data projector to a laptop:

1. Use the provided VGA cable to connect the data projector to the laptop; pull down the presentation screen
2. Connect one end of the cable to the data projector's **VGA input** jack
3. Connect the other end of the cable to the laptop's **VGA output** jack
4. Connect the provided power cord to the data projector and a power outlet; plug in the laptop if desired
5. Turn everything on — press any keys as prompted by the projector start-up screen; focus & resize as required

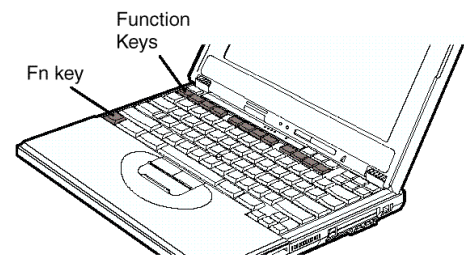

### TROUBLESHOOTING:

#### *Projector not turning on?*

- Check all cables & power supply; press “on” button

#### *Projector turning on, but “no signal” or no image (blue / logo screen)?*

- Use Function keys to toggle video output: hold down the **fn** key, and press the f7 key (library laptops), or the function key that has one of these icons:  

**A.V. Cable Guide on reverse side →**
